

JET REPORTS 22.1

WHAT'S NEW?

NEW CONNECTIVITY, ENHANCED AUTHENTICATION, AND IMPROVED PERFORMANCE

We are pleased to announce the availability of Jet Reports version 22.1, which includes new connectivity options, enhancements to authentication services, and improved report performance.

Highlights include:

- New support for Dynamics 365 F&SCM
- Enhanced authentication methods to streamline workflows
- Performance improvements for BC customers

New Microsoft Dynamics Connectivity Option

➤ **New Jet Reports D365 F&SCM Connector**

Jet Reports can now connect to and report against a Microsoft Dynamics 365 Finance and Supply Chain Management (D365 F&SCM) data source using a high-performance data connector. With the release of Jet Reports 22.1, customers using Dynamics GP, NAV, or D365 Business Central (BC) who are considering migrating to Dynamics 365 F&SCM can continue to use Jet Reports, bringing the power, flexibility, and simplicity of Jet to their new ERP.

- Easier change management – working with a familiar reporting tool makes the transition easier for users and reduces training needs.
- Simple, self-serve reporting for D365 F&SCM – connector gives near live access to ERP data in Jet Reports, bringing Jet's powerful, yet easy to use Excel-based reporting to D365 F&SCM customers.

Enhanced Authentication Methods

➤ Jet Reports and Jet Hub feature updated authentication

To further streamline workflows and improve ease of use around data connectivity and authentication, version 22.1 introduces the following:

- Streamlined login experience – Both Jet Reports and Jet hub now include Azure AD Authentication for Jet Data Warehouse Data Sources hosted in Azure SQL.

Jet Reports Performance Enhancements

➤ Improved Report Performance for BC Customers

With each release of Jet Reports, we are focusing on improving real-world performance for our BC customers. Our engineering team is working closely with our customers to identify and resolve performance bottlenecks. In version 22.1, customers should see performance gains around formula calculations, data caching, and batch query execution when using an OData connection.
